How to Save a Preset

Quick Save Method

Step 1: Single-tap the preset icon .

Step 2: Tap on the plus icon to create a preset with the current view. It will automatically be numbered in chronological order.

Full Menu Method

Step 1: Tap the gear icon to open up the full preset menu.

Step 2: Tap the plus icon at the bottom of the menu. The following keypad will open.

Step 3: Tap on the number that you would like to save the preset as, then tap the check mark .

Table 10 - How to Use Presets   1

Step 4: To save a second preset as preset "2", create another view that you would like to save, then follow the same steps as above, but tap on "2" on the keypad. This will save your new image as preset 2.

NOTE: You can save presets at any number you want. They do not have to be saved in chronological order if created from the preset menu.

Table 10 - How to Use Presets   2
How to Reorder Presets

Step 1: Open the preset menu by following the steps above.

Step 2: When in the preset menu, tap on the stack of three bars icon, . Each preset will now have a stack of three bars next to it.
Step 3: By tapping on the individual preset's stack of three bars, hold and drag so you can switch the order of any presets you have in the preset menu.

Table 10 - How to Use Presets   3
How to Remove Presets
Step 1: Open the preset menu by following the same steps as above.

Step 2: Highlight the number of the preset you would like to remove.

Step 3: Tap on the minus icon at the bottom of the preset menu to remove this preset. A message box will pop up asking if you are sure you want to delete it. Tap yes and the preset will be removed.

How to Select All Presets

Step 1: If you have multiple presets and want to select all to either delete, export, or add

to folder, tap the check mark at the bottom of the preset menu .

Step 2: All the presets are now selected and you can either delete, export, or add all of them to a folder.

Table 10 - How to Use Presets   5
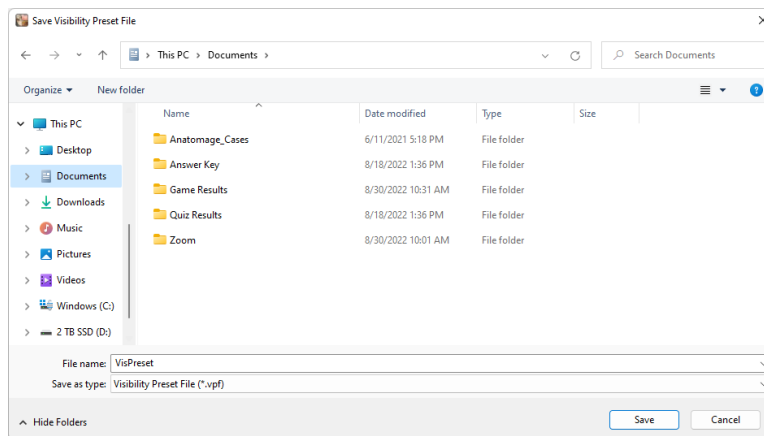

How to Export Presets

Step 1: Open the preset menu by following the steps on page 1.

Step 2: You can either choose to export an individual preset by tapping on that specific number, or you can export the whole group of presets by selecting all.

Step 3: To select all, follow the steps in the "How to Select All Presets" section.

Step 4: When all of your presets are selected, tap on the Export VPF icon on the preset menu. The save window will appear. Give this VPF file a name and save it to a folder, PC location, or USB.

NOTE: Include the name of the cadaver you made these presets in (ex. Hans) since these presets will only load in correctly in the scan you made them in.

NOTE: VPF is a 3D file type. This file type will not open on any other computer. This will only open when imported back into the Table software.
How to Import Presets

How to Create and Access a Preset Folder

Step 1: Open the preset menu by following the steps on page 1.
Step 2: Tap on the folder icon at the bottom of the preset menu to open the preset folder menu.

Step 3: To add a new folder, tap on the plus icon at the bottom of the folder menu. This will open up a create folder window.

Step 4: Give the folder a name. You can also choose to give the folder a pin. This will lock the folder and no one will be able to open the folder unless the pin is entered. The pin is any number code you would like.

Table 10 - How to Use Presets   9

Step 5: To access a folder with a pin, tap on the folder from the preset folder menu. You will be asked to enter the pin.

Step 6: After you enter the pin, you will have access to all presets in the folder.

NOTE: If you do not have a pin on a folder, tapping on the folder will open it and give you access to the presets.
